Department of Artificial Intelligence and Data Science

ASSESSMENT TOOL 3 – MCQ Test

Course Code:	DSA03	Course Title:	Natural Language Processing
CO Assessed:	CO3 – Precision	Assessment:	Assessment Tool 3 – MCQ Test
Weightage:	10% of CIA		
CO5 Statement:	Apply N-gram models, smoothing techniques, part-of-speech tagging systems and to evaluate effective syntactic analysis. (BL-3)		
Student Name:	Moshika M	Reg. No.:	192424064
Section / Batch:	B.Tech (AI-DS)	Date:	08.08.2026

Code of Conduct

I Moshika M - 192424064 (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student:

Instructions

- Read each question carefully before selecting your answer.
- This assessment consists of 50 multiple-choice questions.
- Do not use external resources, AI tools, textbooks, or assistance from others during the assessment unless explicitly permitted by the instructor.
- Upload Score Card in GCR and submit score card printout.
- Duration: 30 minutes.

Section / Topic	Focus	Q Nos
Context-Free Grammars (CFG)	CFG components, productions, terminals, non-terminals, recursion, sentence generation	1 – 10
Sentence Construction and Agreement	Parse trees, sentence structure, grammatical agreement, syntactic validation	11 – 20
Subcategorization	Verb frames, complement requirements, argument structure analysis	21 – 25
Top-Down Parsing	Parsing strategy, derivation process, recursion issues, grammar expansion	26 – 30
Earley Parsing	Predictor, Scanner, Completer operations, ambiguity handling	31 – 35
Feature Structures	Feature representation, unification, constraint checking, agreement enforcement	36 – 40
Probabilistic Context-Free Grammars (PCFG)	Rule probabilities, ambiguity resolution, probabilistic parsing	41 – 48
Integrated Syntax Analysis	CFG + Feature Structures + PCFG integration in NLP applications	49 – 50

- 1. What is the primary goal of Natural Language Processing (NLP)?**
- A) To increase computer hardware speed
 - B) To enable computers to process and understand human language
 - C) To design operating systems
 - D) To manage computer networks

ANSWER: B) To enable computers to process and understand human language

- 2. Which model is commonly used to describe whether a string belongs to a particular language?**
- A) Database model
 - B) Mathematical model
 - C) Financial model
 - D) Hardware model

ANSWER: B) Mathematical model

- 3. Which symbol is commonly used in regular expressions to represent zero or more occurrences of the preceding element?**
- A) +
 - B) ?
 - C) *
 - D) ^

ANSWER: C) *

- 4. Which regular expression represents a sequence containing one or more occurrences of a?**
- A) a*
 - B) a+
 - C) a?
 - D) a|

ANSWER: B) a+

5. What is the main function of a Finite State Automaton (FSA)?

- A) To store large databases**
- B) To recognize patterns in strings**
- C) To translate programming languages**
- D) To generate images**

ANSWER: B) To recognize patterns in strings

6. Which type of morphology deals with grammatical variations such as tense and number?

- A) Derivational morphology**
- B) Inflectional morphology**
- C) Computational morphology**
- D) Structural morphology**

ANSWER: B) Inflectional morphology

7. Which example represents derivational morphology?

- A) cat → cats**
- B) walk → walked**
- C) happy → happiness**
- D) book → books**

ANSWER: C) happy → happiness

8. What is the purpose of finite-state morphological parsing?

- A) To identify the internal morphological structure of words**
- B) To identify network protocols**
- C) To calculate sentence length**
- D) To generate numerical data**

ANSWER: A) To identify the internal morphological structure of words

9. What does the Porter Stemmer primarily perform?

- A) Sentence parsing**
- B) Word stemming**
- C) POS tagging**
- D) Speech recognition**

ANSWER: B) Word stemming

10. The word “unhappiness” can be analyzed as un + happy + ness. Which process is illustrated by this analysis?

- A) Inflectional morphology only
- B) Derivational morphology
- C) Syntax parsing
- D) Regular expression matching

ANSWER: B) Derivational morphology

11. What does an N-gram model estimate?

- A) Probability of a word based on previous words
- B) Number of letters in a word
- C) Meaning of a paragraph
- D) Number of sentences in a document

ANSWER: A) Probability of a word based on previous words

12. A bigram model considers how many words at a time?

- A) One
- B) Two
- C) Three
- D) Four

ANSWER: B) Two

13. What is the main problem with an unsmoothed N-gram model?

- A) It cannot count words
- B) It assigns zero probability to unseen N-grams
- C) It cannot recognize nouns
- D) It cannot process sentences

ANSWER: B) It assigns zero probability to unseen N-grams

14. What is the primary purpose of smoothing in language models?

- A) To remove punctuation
- B) To assign probabilities to unseen events
- C) To identify verbs
- D) To shorten sentences

ANSWER: B) To assign probabilities to unseen events

15. What does entropy measure in an N-gram language model?

- A) Linguistic uncertainty
- B) Number of nouns
- C) Sentence length
- D) Number of characters

ANSWER: A) Linguistic uncertainty

16. Which word class does “quickly” belong to in the sentence “She runs quickly”?

- A) Noun
- B) Verb
- C) Adjective
- D) Adverb

ANSWER: D) Adverb

17. What is the purpose of a tagset in POS tagging?

- A) To define the set of grammatical labels used for words
- B) To store sentences
- C) To generate regular expressions
- D) To calculate entropy

ANSWER: A) To define the set of grammatical labels used for words

18. In the sentence “Book a ticket,” what is the POS of “Book”?

- A) Noun
- B) Verb
- C) Adjective
- D) Adverb

ANSWER: B) Verb

19. Which POS tagging approach uses manually written linguistic rules?

- A) Stochastic tagging
- B) Rule-based tagging
- C) Transformation-based tagging
- D) Random tagging

ANSWER: B) Rule-based tagging

20. Which POS tagging method combines an initial tagging with a sequence of corrective transformations?

- A) Rule-based tagging
- B) Stochastic tagging
- C) Transformation-based tagging
- D) Dictionary-based tagging

ANSWER: C) Transformation-based tagging

21. What is the primary purpose of a Context-Free Grammar (CFG) in NLP?

- A) To represent syntactic structure of sentences
- B) To calculate word frequency
- C) To identify word meanings
- D) To translate documents

ANSWER: A) To represent syntactic structure of sentences

22. Which component of a CFG specifies how a non-terminal can be expanded?

- A) Terminal symbol
- B) Production rule
- C) Probability table
- D) Lexicon only

ANSWER: B) Production rule

23. In the rule $S \rightarrow NP VP$, what does S usually represent?

- A) Sentence
- B) Subject
- C) Semantics
- D) String

ANSWER: A) Sentence

24. Which structure visually represents the syntactic organization of a sentence?

- A) Bar chart
- B) Parse tree
- C) Flowchart
- D) Frequency table

ANSWER: B) Parse tree

25. What does grammatical agreement ensure?

- A) Words have the same number of letters**
- B) Related words have compatible grammatical features**
- C) All words have the same meaning**
- D) Sentences contain equal numbers of words**

ANSWER: B) Related words have compatible grammatical features

26. What does subcategorization describe?

- A) The arguments or complements that a word, especially a verb, requires**
- B) The number of letters in a word**
- C) The probability of a sentence**
- D) The meaning of punctuation**

ANSWER: A) The arguments or complements that a word, especially a verb, requires

27. What is parsing in NLP?

- A) Converting text into numbers only**
- B) Determining the syntactic structure of a sentence**
- C) Removing stop words**
- D) Translating words between languages**

ANSWER: B) Determining the syntactic structure of a sentence

28. Which parsing strategy begins with the start symbol and attempts to generate the input sentence?

- A) Bottom-up parsing**
- B) Top-down parsing**
- C) Stochastic tagging**
- D) Semantic parsing**

ANSWER: B) Top-down parsing

29. Which parsing algorithm can parse sentences using dynamic programming and handle left-recursive grammars?

- A) Porter algorithm**
- B) Earley parser**
- C) Viterbi tagger**
- D) PageRank algorithm**

ANSWER: B) Earley parser

30. What is the purpose of a Probabilistic Context-Free Grammar (PCFG)?

- A) To associate probabilities with grammar productions**
- B) To remove grammar rules**
- C) To identify word stems**
- D) To classify documents**

ANSWER: A) To associate probabilities with grammar productions

31. What is the main objective of semantic analysis?

- A) To determine the meaning of linguistic expressions**
- B) To count characters**
- C) To identify punctuation**
- D) To format documents**

ANSWER: A) To determine the meaning of linguistic expressions

32. Which formal system is commonly used to represent relationships between entities and properties?

- A) First-Order Predicate Calculus**
- B) Regular Expression**
- C) Finite Automaton**
- D) N-gram model**

ANSWER: A) First-Order Predicate Calculus

33. In first-order predicate logic, what does $P(x)$ typically represent?

- A) A probability**
- B) A predicate applied to an argument**
- C) A parsing rule**
- D) A POS tag**

ANSWER: B) A predicate applied to an argument

34. Which representation can express the statement “John loves Mary” as a relationship between entities?

- A) loves(John, Mary)**
- B) John + Mary**
- C) John/Mary**
- D) John = Mary**

ANSWER: A) loves(John, Mary)

35. What is syntax-driven semantic analysis?

- A) Deriving meaning representations based on syntactic structure**
- B) Counting syntactic words**
- C) Removing grammatical rules**
- D) Generating random meanings**

ANSWER: A) Deriving meaning representations based on syntactic structure

36. What is a lexeme?

- A) An abstract vocabulary unit representing related word forms**
- B) A punctuation mark**
- C) A sentence structure**
- D) A grammar rule**

ANSWER: A) An abstract vocabulary unit representing related word forms

37. What does word sense refer to?

- A) The grammatical category of a word**
- B) A particular meaning of a word**
- C) The number of letters in a word**
- D) The pronunciation of a word**

ANSWER: B) A particular meaning of a word

38. What is the main goal of Word Sense Disambiguation (WSD)?

- A) To determine the intended meaning of an ambiguous word**
- B) To identify sentence boundaries**
- C) To count words**
- D) To remove prefixes**

ANSWER: A) To determine the intended meaning of an ambiguous word

39. In “The fisherman sat on the bank,” which meaning of “bank” is most appropriate?

- A) Financial institution**
- B) River side**
- C) Storage facility**
- D) Computer memory**

ANSWER: B) River side

40. What is the primary goal of Information Retrieval (IR)?

- A) To retrieve relevant information from a collection of documents**
- B) To generate grammar rules**
- C) To identify speech sounds**
- D) To stem every word**

ANSWER: A) To retrieve relevant information from a collection of documents

41. What does discourse analysis primarily study?

- A) Language beyond individual sentences and its context**
- B) Individual characters only**
- C) Computer hardware**
- D) Word spelling only**

ANSWER: A) Language beyond individual sentences and its context

42. What is reference resolution?

- A) Determining what an expression such as “he” or “it” refers to**
- B) Finding the number of words in a sentence**
- C) Identifying punctuation marks**
- D) Translating a sentence**

ANSWER: A) Determining what an expression such as “he” or “it” refers to

43. In the sentence “Ravi bought a car. He likes it,” what does “He” refer to?

- A) Car**
- B) Ravi**
- C) Likes**
- D) It**

ANSWER: B) Ravi

44. What does text coherence refer to?

- A) The meaningful and logical relationship among parts of a text**
- B) The number of words in a paragraph**
- C) The spelling of words**
- D) The number of punctuation marks**

ANSWER: A) The meaningful and logical relationship among parts of a text

45. What is a discourse act or dialogue act?

- A) The communicative function performed by an utterance**
- B) The number of words in dialogue**
- C) A grammatical error**
- D) A punctuation rule**

ANSWER: A) The communicative function performed by an utterance

46. Which of the following is an example of a dialogue act?

- A) Request**
- B) Noun**
- C) Prefix**
- D) Stem**

ANSWER: A) Request

47. What is the main purpose of a conversational agent?

- A) To interact with users through natural language**
- B) To perform only mathematical calculations**
- C) To store images**
- D) To compile source code**

ANSWER: A) To interact with users through natural language

48. What is the purpose of surface realization in language generation?

- A) To convert an abstract representation into natural-language text**
- B) To identify word senses**
- C) To parse a sentence**
- D) To calculate N-gram entropy**

ANSWER: A) To convert an abstract representation into natural-language text

49. Which machine translation approach uses an intermediate language-independent representation?

- A) Direct translation**
- B) Interlingua**
- C) Word-for-word translation**
- D) Rule deletion**

ANSWER: B) Interlingua

50. What do statistical approaches to machine translation primarily learn from?

- A) Parallel and bilingual language data**
- B) Only punctuation marks**
- C) Computer hardware specifications**
- D) Regular expressions alone**

ANSWER: A) Parallel and bilingual language data

Rubrics for Calculation

Criteria	Weight age	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Number of Correct Answers	100%	45 to 50 correct answers	38 to 44 correct answers	25 to 37 correct answers	0 to 24 correct answers
Accuracy	100%	Excellent (90–100%)	Good (75–89%)	Average (50–74%)	Poor (Below 50%)

No. of Questions	Number of Correct Answers	Accuracy	Total %
50			

Faculty In-charge	Course Coordinator	Program Director
Signature: _____	Signature: _____	Signature: _____
Date: _____	Date: _____	Date: _____
