

SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Artificial Intelligence and Data Science

ASSESSMENT TOOL 1 – APPLICATION BASED QUESTIONS

Course Code:	DSA0305	Course Title:	Natural Language Processing
CO Assessed:	CO1 – Imitation (L1)	Assessment:	Assessment Tool 1 – Application Based Questions
Weightage:	40% of CIA		
CO1 Statement:	Analyse NLP models, regular expression patterns, finite state automata, morphological processing techniques and to interpret language processing. (BL-3)		
Student Name:	Moshika M	Reg. No.:	192424064
Section / Batch:	B. Tech (AI & DS)	Date:	14.07.2026

Code of Conduct

I am Moshika M 192424064 (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student:

Instructions

- Develop a modular and efficient Python program that satisfies all the functional requirements specified in the problem statement.
- Demonstrate the correctness of the implementation using suitable test cases and justify the output obtained.
- Follow good programming practices, including meaningful variable names, proper code indentation, comments, and error handling wherever applicable.
- Duration: 30 minutes.

Section / Topic	Focus	Q Nos
Information Extraction	Regex-Based Information Extraction	1
Pattern Matching	Regex Pattern Matching	2
Regular Expression Patterns	Regex-Based Input Validation	3

Section 1: Regular Expressions – Resume Information Extraction

1. A multinational recruitment company receives thousands of resumes every day in text format. The HR department requires an automated system to extract candidate information for shortlisting.

Design and implement a Python-based resume information extraction system using Regular Expressions that performs the following tasks:

Extract the candidate's name.

Identify email addresses.

Extract mobile numbers.

Detect technical skills (Python, Java, SQL, Machine Learning, NLP).

Extract years of experience.

Generate a structured summary of the candidate's profile.

Display candidates who satisfy the minimum eligibility criteria (minimum 2 years of experience and Python skill).

```
import re

resume = """
Name: Rahul Sharma
Email: rahul.sharma@gmail.com
Mobile: 9876543210
Skills: Python, Java, SQL, Machine Learning
Experience: 3 years
"""

# Extract Name
name = re.search(r"Name:\s*(.*)", resume)
name = name.group(1) if name else "Not Found"

# Extract Email
emails = re.findall(r"[A-Za-z0-9._%+-]+@[A-Za-z0-9.-]+\.[A-Za-z]{2,}", resume)

# Extract Mobile Number
mobile = re.findall(r"\b\d{10}\b", resume)

# Detect Skills
skill_list = ["Python", "Java", "SQL", "Machine Learning", "NLP"]
skills = [skill for skill in skill_list if re.search(skill, resume, re.IGNORECASE)]

# Extract Experience
exp = re.search(r"(\d+)\s+years?", resume, re.IGNORECASE)
experience = int(exp.group(1)) if exp else 0

# Structured Summary
print("----- Candidate Summary -----")
print("Name:", name)
print("Email:", emails)
print("Mobile:", mobile)
print("Skills:", skills)
print("Experience:", experience, "Years")

# Eligibility Check
if experience >= 2 and "Python" in skills:
    print("\nEligible for Shortlisting")
else:
    print("\nNot Eligible")
```

Output

[Clear](#)

```
----- Candidate Summary -----
Name: Rahul Sharma
Email: ['rahul.sharma@gmail.com']
Mobile: ['9876543210']
Skills: ['Python', 'Java', 'SQL', 'Machine Learning']
Experience: 3 Years

Eligible for Shortlisting

=== Code Execution Successful ===
```

Section 2: Regular Expressions – Product Search System

2. An e-commerce company plans to enhance its product search engine to improve customer experience through flexible keyword matching.

Design and implement a Python-based product search system using Regular Expressions that performs the following tasks:

Search products using an exact keyword.
Perform prefix-based searches.
Perform suffix-based searches.
Search using partial keywords.
Perform case-insensitive searches.
Display all matching product names.
Generate a report showing the total number of matching products for each search.

```
import re

products = [
    "Laptop",
    "Laptop Bag",
    "Mouse",
    "Wireless Mouse",
    "Keyboard",
    "USB Cable",
    "Python Book",
    "Java Book",
    "SQL Guide"
]

keyword = input("Enter Search Keyword: ")

# Exact Search
exact = [p for p in products if re.fullmatch(keyword, p, re.IGNORECASE)]

# Prefix Search
prefix = [p for p in products if re.match(keyword, p, re.IGNORECASE)]

# Suffix Search
suffix = [p for p in products if re.search(keyword + r"$", p, re.IGNORECASE)]

# Partial Search
partial = [p for p in products if re.search(keyword, p, re.IGNORECASE)]

# Case-Insensitive Search
```

```

case = partial

print("\nExact Match:", exact)
print("Prefix Match:", prefix)
print("Suffix Match:", suffix)
print("Partial Match:", partial)
print("Case-Insensitive Match:", case)

print("\n----- Search Report -----")
print("Exact Matches:", len(exact))
print("Prefix Matches:", len(prefix))
print("Suffix Matches:", len(suffix))
print("Partial Matches:", len(partial))
print("Case-Insensitive Matches:", len(case))

```

Output

Clear

```

Enter Search Keyword: Book

Exact Match: []
Prefix Match: []
Suffix Match: ['Python Book', 'Java Book']
Partial Match: ['Python Book', 'Java Book']
Case-Insensitive Match: ['Python Book', 'Java Book']

----- Search Report -----
Exact Matches: 0
Prefix Matches: 0
Suffix Matches: 2
Partial Matches: 2
Case-Insensitive Matches: 2

=== Code Execution Successful ===

```

Section 3: Regular Expressions – University Registration System

3. A university is developing an automated online registration portal to verify student information before course enrollment.

Design and implement a Python-based validation system using Regular Expressions that performs the following tasks:

- Validate the student register number.
- Validate the institutional email address.
- Validate the course code.
- Validate the semester information.
- Validate the student's mobile number.
- Display appropriate validation messages for each field.
- Generate a final registration status report indicating whether the registration is successful.

```

import re

reg_no = input("Enter Register Number: ")
email = input("Enter Institutional Email: ")
course = input("Enter Course Code: ")
semester = input("Enter Semester: ")
mobile = input("Enter Mobile Number: ")

```

```
status = True

# Register Number
if re.fullmatch(r"\d{2}[A-Z]{3}\d{4}", reg_no):
    print("Register Number: Valid")
else:
    print("Register Number: Invalid")
    status = False

# Institutional Email
if re.fullmatch(r"[a-zA-Z0-9._%+-]+@college\.edu", email):
    print("Email: Valid")
else:
    print("Email: Invalid")
    status = False

# Course Code
if re.fullmatch(r"[A-Z]{2,4}\d{3}", course):
    print("Course Code: Valid")
else:
    print("Course Code: Invalid")
    status = False

# Semester
if re.fullmatch(r"[1-8]", semester):
    print("Semester: Valid")
else:
    print("Semester: Invalid")
    status = False

# Mobile Number
if re.fullmatch(r"[6-9]\d{9}", mobile):
    print("Mobile Number: Valid")
else:
    print("Mobile Number: Invalid")
    status = False

# Final Report
print("\n----- Registration Status -----")
if status:
    print("Registration Successful")
else:
    print("Registration Failed")
```

Output

Clear

```
Enter Register Number: 22CSE1001
Enter Institutional Email: student@college.edu
Enter Course Code: CSA301
Enter Semester: 5
Enter Mobile Number: 9876543210
Register Number: Valid
Email: Valid
Course Code: Valid
Semester: Valid
Mobile Number: Valid

----- Registration Status -----
Registration Successful

=== Code Execution Successful ===
```

Rubrics for Calculation

Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Problem Context	20	Clearly understands the problem and accurately identifies all requirements	Good understanding with minor gaps	Basic understanding; some requirements unclear	Poor understanding or misinterpretation of the problem
Application of Concepts	30	Accurately applies appropriate concepts to solve complex problems	Applies relevant concepts correctly with minor errors	Applies basic concepts with limited accuracy	Fails to apply appropriate concepts
Problem-Solving Approach	20	Logical, well-structured, and efficient approach	Mostly logical approach with minor gaps	Basic approach with some inconsistencies	Illogical or unclear approach
Accuracy of Solution	20	Completely correct solution with proper justification	Mostly correct with minor errors	Partially correct solution	Incorrect or incomplete solution
Clarity	10	Clear, well-organized, and properly explained solution	Understandable with minor clarity issues	Limited clarity and explanation	Poorly presented and difficult to understand

Q. No. / Criteria	Understanding of Problem Context	Application of Concepts	Problem-Solving Approach	Accuracy of Solution	Clarity	Sub. Total	Total %
