Department of Artificial Intelligence and Data Science

ASSESSMENT TOOL 2 – SCENARIO BASED

Course Code:	DSA0305	Course Title:	Natural Language Processing
CO Assessed:	CO2 – Manipulation	Assessment:	Assessment Tool 2 – SCENARIO BASED
Weightage:	30% of CIA		
CO5 Statement:	Design inflectional, derivational, finite-state parsing, stemming algorithms and for analyse morphological methods. (BL-3)		
Student Name:	Moshika M	Reg. No.:	192424064
Section / Batch:	B.Tech (AI-DS)	Date:	01.08.2026

Code of Conduct

I Moshika M (192424064) (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student:

Instructions

- Read all questions carefully before attempting the answers.
- Answer all five questions. Each question carries equal marks.
- Show all intermediate steps, calculations, probability computations, tagging decisions, and justifications wherever applicable.
- Duration: 30 minutes.

Section / Topic	Focus	Q Nos
English Word Classes, Tagsets for English, Part of Speech Tagging	Morphological decomposition of analyzing, analysis, and analytical; identification of roots, affixes, inflectional and derivational forms, and normalization for indexing.	Q1
English Word Classes, Tagsets for English, Stochastic Part of Speech Tagging	Morphological parsing of disagree, agreement, and agreeable; identification of prefixes, suffixes, base forms, and semantic effects of derivation.	Q2
Counting Words, English Word Classes, Part of Speech Tagging	Morphology-based normalization of govern, government, and governance for topic modeling, clustering, and lexical standardization.	Q3
Rule-Based Part of Speech Tagging, Transformation-Based Tagging	Morphological analysis of activate, activation, and reactivation; identification of derivational layers, word-class changes, and semantic shifts.	Q4
Rule-Based Part of Speech Tagging, English Word Classes, Part of Speech Tagging	Inflectional normalization of create, creates, and creating; extraction of root forms and classification of tense/aspect transformations.	Q5

Annexure A – SCENARIO BASED

1. A large-scale search engine indexing system processes user queries containing word variants such as “analyzing”, “analysis”, and “analytical”. The system must improve retrieval accuracy by grouping semantically related terms under a unified representation. Design a morphological processing approach to decompose each input word into root and affixes, distinguish between inflectional and derivational forms, and normalize them for indexing. Apply the process to the given inputs and determine the root form along with the morphological structure of each word.

ANSWER:

Input:

analyzing, analysis, analytical

Rules

- **-ing** → Present participle (**Inflectional**)
- **-sis** → Noun formation (**Derivational**)
- **-ical** → Adjective formation (**Derivational**)

Word	Root	Affix	Type	Normalized Form
analyzing	analyze	-ing	Inflectional	analyze
analysis	analyze	-sis	Derivational	analyze
analytical	analyze	-ical	Derivational	analyze

Morphological Structure

- analyzing → analyze + ing
- analysis → analyze + sis
- analytical → analyze + ical

Final Output

analyzing → analyze
analysis → analyze
analytical → analyze

2. An AI-based sentiment analysis platform receives product reviews containing words like “disagree”, “agreement”, and “agreeable”. The system must interpret sentiment consistently despite variations in word formation. Develop a morphological parsing strategy to identify prefixes, suffixes, and base forms, while capturing how derivational changes influence meaning. Process the given inputs to extract roots and classify each transformation, ensuring accurate semantic interpretation across all word forms.

ANSWER:

Input:

disagree, agreement, agreeable

Rules

- **dis-** → Negative prefix
- **-ment** → Noun suffix
- **-able** → Adjective suffix

Word	Prefix	Root	Suffix	Type
disagree	dis	agree	—	Derivational
agreement	—	agree	-ment	Derivational
agreeable	—	agree	-able	Derivational

Morphological Breakdown

- disagree → dis + agree
- agreement → agree + ment
- agreeable → agree + able

Final Output

disagree → agree
agreement → agree
agreeable → agree

3. A text analytics pipeline in a news aggregation system handles documents containing terms such as “govern”, “government”, and “governance”. The system must standardize these variations for topic modeling and clustering. Construct a morphology-based normalization mechanism that decomposes each word into its root and affixes, identifies derivational layers, and maps them to a common base form. Apply the approach to the input words and derive the normalized representation along with their morphological breakdown.

ANSWER:

Input:

govern, government, governance

Rules

- **-ment** → Noun formation
- **-ance** → Noun formation

Word	Root	Affix	Type	Normalized Form
govern	govern	—	Base Word	govern
government	govern	-ment	Derivational	govern
governance	govern	-ance	Derivational	govern

Morphological Breakdown

- govern → govern
- government → govern + ment
- governance → govern + ance

Final Output

govern → govern
government → govern
governance → govern

4. A document classification system processes input words such as “activate”, “activation”, and “reactivation” to improve semantic grouping and indexing. Construct a morphological parsing strategy to identify prefixes, suffixes, and root forms while distinguishing derivational layers. Analyze how prefix addition and suffix transformation affect meaning and word class. Apply the process to decompose each word and map them to a unified base representation. Derive the morphological structure and normalized root for each input word.

ANSWER:

Input:

activate, activation, reactivation

Rules

- **re-** → Prefix (again)
- **-ion** → Noun suffix

Word	Prefix	Root	Suffix	Type	Normalized Form
activate	—	activate	—	Base Word	activate
activation	—	activate	-ion	Derivational	activate
reactivation	re	activate	-ion	Derivational	activate

Morphological Breakdown

- activate → activate
- activation → activate + ion
- reactivation → re + activate + ion

Effect on Meaning

- **activate** → make active (verb)
- **activation** → process of making active (noun)
- **reactivation** → making active again (noun)

Final Output

activate → activate
activation → activate
reactivation → activate

5. A search optimization module processes input words such as “create”, “creates”, and “creating” to ensure consistent retrieval across grammatical variations. Design a morphology-based normalization approach focusing on inflectional transformations such as tense and aspect. Identify suffix patterns and map all variations to a common base form without altering meaning. Apply the process to extract root forms and classify each transformation. Determine the morphological breakdown and normalized output for each word.

ANSWER:

Input:

create, creates, creating

Rules

- **-s** → Present tense (Inflectional)
- **-ing** → Present participle (Inflectional)

Word	Root	Suffix	Type	Normalized Form
create	create	—	Base Word	create
creates	create	-s	Inflectional	create
creating	create	-ing	Inflectional	create

Morphological Breakdown

- create → create
- creates → create + s
- creating → create + ing

Final Output

create → create
creates → create
creating → create

Rubrics for Calculation

Criteria	Weightage (%)	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)
Understanding of Scenario	20%	Demonstrates clear and complete understanding of the scenario and context	Shows good understanding with minor gaps	Partial understanding; misses key aspects	Misinterprets or fails to understand the scenario
Identification of Key Issues	20%	Accurately identifies all relevant issues and factors involved	Identifies most key issues with minor omissions	Identifies limited issues; some irrelevant points	Unable to identify key issues
Application of Concepts	25%	Applies appropriate concepts effectively to address the scenario	Applies concepts with minor errors	Limited or partially correct application	Unable to apply relevant concepts
Decision Making	20%	Makes well-reasoned, logical decisions with strong rationale	Makes reasonable decisions with some justification	Makes weak decisions with limited justification	No clear decisions made or rationale provided
Clarity of Response	15%	Response is clear, structured, and logically presented	Generally clear with minor issues	Somewhat unclear or poorly structured	Disorganized and difficult to understand

Q. No. / Criteria Level	Understanding of Scenario	Identification of Key Issues	Application of Concepts	Decision Making	Clarity of Response	Sub. Total	Total %
1							
2							
3							
4							
5
